- access permitted from 7 a.m. to 6 p.m.
- access permitted at all times

Protect everything that makes you successful

Sapphire Pro secures your people, information and equipment

Sapphire Pro software from GE Interlogix gives you the tools to secure access throughout your operation. You can control where thousands of users go and when they can go there. And Sapphire Pro is so easy to use, it practically configures itself.

Sets itself up

With its Auto Configuration tool, Sapphire Pro detects and configures all field hardware, readers, alarm points and communications devices. It can also batch-configure user access cards. Just like that, you have a fully functional system you can customize later as needed.

No interruption during downloads

Some access control systems don't work if the field panel is downloading from the database. Sapphire Pro does. With Instant Access, your users can enter approved areas during a download, and you can eliminate alarm monitoring interruptions.

Protects your data

Data Guard protects your data from corruption if there's a communication failure during a download. With a backup database at the field panel, Sapphire Pro can still grant or deny access during a download.

Familiar, easy-to-use interface

Sapphire Pro uses a familiar Internet browser interface for easy navigation. Interactive icons let you point and click to control doors, alarms and other devices. And integrated badge creation software lets you create customized access cards.

Protect everything that makes your company successful—your people, your information and your equipment—with Sapphire Pro. Call **714-890-0083** or visit our Web site at www.infographicsystems.com/sp for more information.

Tell half a million people where to go

(and when they can go there)

Half a million people—that's a city the size of Denver. Or a large, multinational operation. And you can control access—including where they go and when—with Diamond II software from GE Interlogix.

Large-scale access control

With Diamond II, you can secure your worldwide operations in one system. It supports unlimited card readers and 500,000 users, as well as 40,000 alarm points and outputs. You can also create multiple user privilege levels to ensure that people can only access specific entry points at specific times.

Diamond II uses a partitioned database for performance, reliability, hot redundancy and data security. Plus its open architecture works with SQL and Oracle databases.

Familiar, easy-to-use interface

Diamond II uses a familiar Internet browser interface for easy navigation. Interactive icons let you point and click to control doors, alarms and other devices. And integrated badge creation software lets you create custom access cards.

Integrate with other security products

Diamond II is easy to integrate with other security systems. You can select and display surveillance cameras, control pan/tilt/zoom (PTZ) cameras, arm and disarm alarms, control elevators and more.

Protect everything that makes your company successful—your people, your information and your equipment—with Diamond II access control. Call **714-890-0083** or visit our Web site at www.infographicsystems.com/d2 for more information, including case studies and complete technical specifications.
